Database Zero is a full-blown database system designed to store, query and analyse large datasets.  
Click here for more 'Gscope Projects in Relation Set'.

The interface includes a top navigation bar with links like Home, Projects, and Help. A sidebar on the left lists 'Gscope Projects in Relation Set' with checkboxes. The main area shows a table with columns: Project ID, Title, Description, Status, and some other metrics. A detailed view window is open for a specific project, showing its structure and data.

**EVI-GENORET Database:**  
part of the European IP EVI-GENORET  
*functional genomics of the retina in development, health and disease*  
**Purpose:** management and systematization of biological sample handling and processing, data acquisition and analysis, templates for data storage, mining and integration

**Methods:** SQL relational database based on Object Relational Mapping paradigm.  
• high throughput data processing  
• hierarchical integration and connection of bioinformatics, functional genomics, patient, phenotyping and clinical data  
• publishing with dynamic web technologies (PHP, HTML)

**Results:** collaborative platform for the retinal community  
• federated tools (common or custom) and resources (local and external databases)  
• three main axes of data organisation and processing  
**Patients, Genes and Standards.**  
• integrates a large amount of heterogeneous data: patient records, annotated *in situ* hybridisation images, retinal gene analyses and networks, functional genomics experiments, standardized operating protocols and experiments.  
• automated network system processes local and distant data allowing standardized and complex analysis, correlation studies and knowledge discovery  
• ergonomic and attractive design and intuitive navigation system for querying and visualization.

**Conclusions:** The data network allows effective exploitation and access to interconnected and unified heterogeneous retinal information. EVI-GENORET Database philosophy represents a novel prototypic information network, immersing heterogeneous data in the integration and correlation processes, paving the way for computer-aided diagnosis, disease screening, drug target evaluation and the development of new therapeutics

**Upload** The hierarchical tree organisation of SOPs and raw data is used to store the user uploaded datafiles and offers an interactive tool for uploading and retrieval for various domains: SOPs, Meetings, Training, Reports, Publications...
